STATEMENT OF WORK

Description of Needs

The purpose of this procurement is to obtain a single RFID Asset Control System or equivalent for proof of concept testing. If the proof of concept testing is successful, additional RFID Asset Control Systems may be procured.

Environmental Considerations

RFID systems are most commonly used as inventory control systems in the retail channel. However, submarine Fleet use is anticipated to place these systems pier-side. While pier-side the systems will be exposed to various climates and conditions (e.g. extreme heat, long periods of operation in the sun, operation in snow, tropical rain, and salt spray). Because of the busy nature of a pier, the system must also be capable of movement via forklift and hand truck. On a pier, space is at a premium therefore the system must be able to be stored on one pallet. Fleet representatives have stated they want the system to be easy to set up, take down, simple to operate, and easy to recover from a fault condition.

Radio Frequency and Transmission Considerations

The radio transmitting equipment must be certified for use in North America by the Federal Communications Commission. Ideally the radio transmitters use a frequency or frequencies that are certified for worldwide use.

The RFID radio transmitting equipment must have undergone an evaluation of Hazards of Electromagnetic Radiation to Ordnance (HERO). The equipment listed in this Technical Data Package has been evaluated. A contractor who recommends substitution of the equipment must provide funding for the HERO evaluation of the recommended substitution.

Project Description and Details

RFID Asset Control System

The RFID Asset Control System must provide hardware protection capability that will alert appropriate personnel when an individual attempts to remove a tagged asset from the submarine. The transponder will provide a unique identification number that ties to the hardware serial number for security management systems. The RFID Asset Control System will consist of the following components:

- Intermec Sabre 1555 Hand-held RFID Reader/Interrogator or equivalent
- Intermec 740 Color Mobile Computer or equivalent
- Intermec eGO 2110 RFID Stationary Reader/Antenna or equivalent
- Micromation GCS2 – Intelligent Gate Controller or equivalent
- Intermec RFID, Passive Tags, 915 MHz, Metal Mount or equivalent

STATEMENT OF WORK

Notional Examples of System and Use

A notional example of the completed system is depicted in Figure 1. The purpose of the system is to alert the watchstander that a tagged item has left the boat. The RFID Antennas are affixed to a platform that can be moved via forklift or hand truck. The platform is also used as a base to store the Intelligent Gate Controller, UPS, storage for the Intermec 740 handheld computer and Sabre 1555 device, and interfaces to shore power. This design enables the entire system to be moved and stored as a unit.

Appendix A – Technical Specifications of Proposed Hardware

Intermec eGO 2110 RFID Stationary Reader/Antenna

The RFID Stationary Readers/Antennas are fully integrated, 902-928 MHz wireless communications devices. The RFID Stationary Reader/Antenna connects to any computer and will read and write to a passing tag within milliseconds. The RFID Stationary Reader/Antenna includes an RF module, digital signal processor, power supply, and antenna. Selected models are configured with separate, external antennas. The unit is supplied with a pole-mount bracket specifically designed for controlled traffic lanes.

The RFID Stationary Reader/Antenna generates an RF signal. The tag reflects the RF signal to convey information back to the RFID Stationary Reader/Antenna. The RFID Stationary Reader/Antenna passes the tag information to a local host computer for processing. All RFID Stationary Readers/Antennas are designed to withstand extreme temperatures, humidity, and vibration. RS-232 with Wiegand or RS-422 with Wiegand-compatible protocol interfaces are available.
